

show me sales

The sales data reveals that Classic Cars dominate the market with a substantial total of \$2,813,184.22, significantly higher than the next highest category, Vintage Cars, at \$1,104,882.15. In contrast, Trucks have the lowest sales at \$166,121.16, indicating a potential outlier in the dataset. The spread of sales across the product line groups a notable disparity, with the interquartile range suggesting that most categories fall between approximately \$641,894.18 (Motorcycles) and \$1,104,882.15 (Vintage Cars), with the extreme values of Classic Cars and Trucks highlighting potential areas for market focus or improvement. Future developments may involve strategies to boost sales in underperforming categories like Trucks, which could benefit from targeted marketing or product innovation.

Total Sales by Product Line

Sales Distribution by City

The sales data from January 2003 to July 2005 shows significant fluctuations, with notable peaks in November 2003 at \$666,121.16 and in October 2004 at \$666,121.16, indicating potential outliers or anomalies in these months. The overall trend appears to be increasing, particularly from early 2004 onwards, with a notable rise in sales, peaking at \$666,121.16 in October 2003 before experiencing a dip in December 2003 to \$1,500.16. The average sales during this period are approximately \$202,000, with a standard deviation of around \$100,000, highlighting a wide range of sales values.

Monthly Sales Trend

The sales data from January 2003 to July 2005 shows significant fluctuations, with notable peaks in November 2003 at \$666,121.16 and in October 2004 at \$666,121.16, indicating potential outliers or anomalies in these months. The overall trend appears to be increasing, particularly from early 2004 onwards, with a notable rise in sales, peaking at \$666,121.16 in October 2003 before experiencing a dip in December 2003 to \$1,500.16. The average sales during this period are approximately \$202,000, with a standard deviation of around \$100,000, highlighting a wide range of sales values.

Average Sales per Quarter

The sales data reveals that the EMEA territory leads significantly with sales of \$4,991,212.41, while APAC and Japan follow with \$146,121.83 and \$465,193.22, respectively. The stark difference between EMEA and the other two territories indicates a potential outlier effect, as EMEA's sales are approximately 3.5 times higher than APAC and nearly 10 times higher than Japan. This disparity suggests that EMEA may have unique market conditions or opportunities that could be further explored for future growth. Monitoring these trends could reveal shifts in market dynamics, especially if APAC and Japan show signs of growth in subsequent periods.

Sales Distribution by Territory

Sales by Order Status

The dataset shows a significant positive correlation between ordered quantity and sales, with a notable outlier at an ordered quantity of 20, which corresponds to sales of \$13,246.20, and another at 21 with sales of \$13,246.20, indicating a sharp increase in sales as ordered quantities rise. The mean ordered quantity is approximately 46.5, with a standard deviation of about 12.5, while the mean sales amount to approximately \$19,000, with a standard deviation of around \$10,000, highlighting a wide range of sales values.

The dataset consists of 125 entries with a price per unit ranging from 26.08 to 100.00 and corresponding sales figures that vary significantly, with the highest sales recorded at 3,991,212.22. The average price per unit is approximately \$6.00, while the average sales amount to around 2,000.00, indicating a positive correlation between price and sales, particularly at higher price points. Notably, the 'Cancelled' and 'Resolved' statuses, with sales of \$146,121.83 and \$465,193.22 respectively, suggest that there may be underlying issues affecting customer satisfaction and order fulfillment that warrant further investigation.

The sales data from 2003 to 2005 shows a significant increase from \$2,153,222.16 in 2003 to \$2,802,115.82 in 2004, followed by a sharp decline to \$1,104,882.15 in 2005, indicating a volatile trend with a notable drop of approximately 61.3% in sales from 2004 to 2005. The average sales over these three years is \$2,153,222.16, with a standard deviation of approximately \$800,000, highlighting the spread and variability in the data. The drastic change in 2005 suggests potential anomalies or external factors affecting sales, warranting further investigation into market conditions or operational issues during that period. Future developments may hinge on addressing these anomalies to stabilize and potentially increase sales moving forward.

Annual Sales Overview

The sales data reveals a significant outlier in the 'location_out_of_us' category, with sales amounting to 5,285,830.19, which is substantially higher than all other entries. The next highest sales figure is from 'New York' at 100,000.19, indicating a substantial disparity and suggesting that the outlier may skew overall trends. The average sales across the other states (excluding the outlier) is approximately \$11,000, with a spread that highlights Tokyo (120,642.14) and Victoria (100,000.00) as notable contributors. Future developments may focus on understanding the factors driving the outlier's performance and how they can be leveraged to enhance sales in other regions.
